Units Sold

214K

Mean Basket Value

\$4.69

Average Hourly Transactions

What the Data Tells Us

- **Insight:** Demand is driven far more by customers' daily routines than by the day of the week. Weekend trading closely mirrors weekday behaviour.
- **Business implication:** Labour planning should focus on predictable hourly peaks rather than increasing staffing simply because it's the weekend.

Barista Espresso
\$91K

Revenue Share vs Volume Share

Average Hourly Units Sold

What the Data Tells Us

- **Insight:** High sales volume does not always translate into the greatest revenue contribution, highlighting products that are popular versus those that are financially valuable.
- **Business implication:** Product decisions should consider both customer demand and revenue generation when planning pricing, promotions and stock levels.

Operational Planning

Using sales patterns to improve bakery preparation

Daily Average Bakery Items Sold

128.25

Average Daily Bakery Sales by Product

Morning Bakery Sales

58.4 %

Average Daily Units Sold

What the Data Tells Us

- **Insight 1:** Around 58% of bakery sales happen before midday, confirming that bakery demand is heavily concentrated in the morning.
- **Business implication:** Most bakery preparation should be completed before opening, with staffing and production focused on the morning rush.
- **Insight 2:** Although sales fluctuate slightly throughout the week, the overall bakery pattern remains remarkably consistent from day to day.
- **Business implication:** A consistent daily production schedule is likely to be more effective than making large adjustments for different weekdays..
